

*"Help Keep the Young Hearts Beating"*

## News Update- April 2017

### Case 10- Chen Yunyang

Our latest case is a baby boy only 3 months old in the Panyu hospital.

He has already been admitted to hospital suffering from pneumonia. He is very underweight and has other associated health conditions that will require medical intervention once the heart surgery is done.

This is the Mother's second marriage. They have been trying for several years to have a baby, so this baby is cherished and they are determined to save him.

The couple come from a family of farmers in Guizhou but are living in Guangzhou. The family had faced various health issues in recent years and family resources have been stretched trying to pay for their medical care which now means they have little money to help their baby.

The father is recently without employment and has been helping to take care of the baby, but hopes to gain permanent work once the baby has received surgery.

The baby is quite weak and requires surgery urgently. We are happy that it has been scheduled within a few days.

This surgery will be supported with funds donated by the British School of Guangzhou. We thank them for their continued support that ensures we can react quickly to help cases such as this.

We wish Chen Yunyang a good recovery.
