Stage 1 -

Pictures and symbols

There are 3 sweets in one bag.

How many sweets are there in 5 bags?

Stage 2 -

Arrays and repeated addition

$$\begin{array}{cccc} \bullet & \bullet & \bullet & \bullet \\ \bullet & \bullet & \bullet & \bullet \end{array} \quad 4 \times 2 \text{ or } 4 + 4$$

$$2 \times 4$$

$$2 + 2 + 2 + 2$$

Stage 3 -

Number lines

E.g. 6×3

Partitioning

E.g. $15 \times 2 = 30$

$$\begin{array}{r} \times \\ 15 \\ 2 \\ \hline 30 \end{array} = 30$$

Stage 4 -

Grid method

E.g. $35 \times 2 = 70$

$$\begin{array}{r|l} \times & 30 & 5 \\ 2 & 60 & 10 \\ \hline & 60 & 10 \end{array} = 70$$

E.g. $123 \times 3 = 369$

$$\begin{array}{r|l} \times & 100 & 20 & 3 \\ 3 & 300 & 60 & 9 \\ \hline & 300 & 60 & 9 \end{array} = 369$$

Stage 5 -

Grid method

72×38

$$\begin{array}{r|l} \times & 70 & 2 \\ 30 & 2100 & 60 \\ 8 & 560 & 16 \\ \hline & 2160 & 2736 \\ & & 1 \end{array} = 2736$$

Progressing to using the grid method for decimals.

Stage 6 -

Column multiplication

72×38

$$\begin{array}{r} 72 \\ \times 38 \\ \hline 576 \\ 2160 \\ \hline 2736 \end{array}$$

Stage 1 -

Pictures / marks

12 children get into teams of 4 to play a game. How many teams are there?

Stage 2 -

Sharing - 6 sweets are shared between 2 people.

How many do they have each? ($6 \div 2$)

Grouping - There are 6 sweets. How many people can have 2 each? (How many 2's make 6?)

Stage 3 -

Division with remainders

$16 \div 3 = 5 \text{ r}1$

Sharing - 16 shared between 3, how many left over?

Grouping - How many 3's make 16, how many left over?

e.g.

Stage 4 -

$30 \div 6$ can be modelled as:

Grouping - groups of 6 taken away and the number of groups counted e.g.

$41 \div 4 = 10 \text{ r}1$

Stage 5 -

Use chunking for division.

$$\begin{array}{r} 8 \overline{) 146} \\ \underline{80} \\ 66 \\ \underline{40} \\ 26 \\ \underline{24} \\ 2 \end{array} \quad \begin{array}{l} (8 \times 10) \\ (8 \times 5) \\ (8 \times 3) \end{array} \quad \begin{array}{l} \text{Total all the} \\ \text{'chunks' of} \\ \text{8 to find the} \\ \text{answer.} \end{array}$$

Answer: 18 r 2

This method can also be used when dividing larger numbers and decimals, and when there is a remainder

T
I
O
N

Stage 1 -

Using number lines to count on ones.

$7 + 4 = 11$

Stage 2 -

$23 + 12 = 23 + 10 + 1 + 1$
 $= 33 + 1 + 1$
 $= 35$

Stage 3 -

Partition into tens and ones and recombine.

Stage 4 -

$83 + 42 = 125$

$80 + 3$
 $+ 40 + 2$
 $120 + 5 = 125$

Progress to:

83
 $+42$
 5
 $\underline{120}$
 125

Stage 5 -

Formal method, showing numbers carried underneath.

358
 $+ 73$
 $\underline{431}$
 11

Extend to numbers with any number of digits and decimals with 1 and 2 decimal places.

T
R
A
C
T
I
O
N

Stage 1 -

Using number lines to count back in ones.

$11 - 7 = 4$

Counting on, using a number line, to find the difference between 7 and 11.

Stage 2 -

Find a small difference by counting up.

$42 - 39 = 3$

Stage 3 -

Counting back in tens and ones.

$37 - 12 = 37 - 10 - 1 - 1$
 $= 27 - 1 - 1$
 $= 25$

Progressing to taking larger jumps with the units.

Stage 4 -

Complementary addition (counting up from the smaller number to the larger number)

$84 - 56 = 28$

Stage 5 -

$83 - 42 = 41$

Progress to:

$80 + 3$
 $- 40 + 2$
 $40 + 1 = 41$

83
 $- 42$
 1
 $\underline{40}$
 41

Stage 6 -

Decomposition

81
 92
 $- 38$
 $\underline{54}$

241
 352
 $- 178$
 $\underline{174}$

Progress to using decomposition with decimals.
