

## **My Special Home**

I was living with my family in an old apartment. Our family decided to move to a better place. I searched on the computer for a good place to live. At last, I found it and it was free! But the problem was that the house was really far and we needed to take an airplane. While our family was on the airplane, I got a headache. If I go up high I feel pressure and I am dizzy. I went to sleep.

The next day, we arrive at this special home. Our family is looking around our home because it has 25 rooms! I am tired from looking around. It is enormous. In this house we can do anything we want. There was a machine that could produce everything.

If I said, "I want a Lamborghini car!" Then a Lamborghini car would come out from the garage. Everything comes out from the garage.

One change is the front door that is made from iron. If someone tries to break the door, they die immediately because the laser will zap that person! We change the design of our house.

I decide to meet my friend, Min Hun. He is my best friend from Korea. I want to have a sleepover. When he arrives at my house, he is very curious about my new special home. He looks in all of the 25 rooms, which takes two hours! After he looks around, we play a video game, Respawnables. It is a killing game. Min Hun and I fight each other, and I lose. He is very good at Respawnables.

Now, it is 12:30 PM. We decide to go to sleep. While we are sleeping, we hear a loud voice outside. We see a shadow. An enormous monster is coming towards us! I bring out a laser gun and aim at his face, but it is not over! The monster becomes bigger! The monster starts to break down our house. The roof is breaking. The monster falls inside because the roof falls down, too. The monster is dead.

Suddenly, a small machine comes from the sky. We read how to use this machine and this machine can repair our house! After the machine fixes our house, it is bigger and we put in a strong shield to prevent monsters from coming into our house!
