

## How to Make A Helicopter

Take a propeller, 1 elastic band, a stick and two paperclips. Unfold the paperclip to attach it to the top of the stick with tape. Make sure the propeller can still spin and it cannot come off the top of the clip.

Attach the other unfolded paper clip to the bottom of the stick and tape it securely in place. Cut out an aviation-themed shape from the card and tape it on (don't waste the spare card—different shapes fly differently so you can experiment later. Remember as the propellers are heavy, they will need a significant counterweight.

Loop an elastic band between the two paperclips, and twist the propeller so that the elastic band starts to twist. When the band is fully twisted twice, it should have enough energy to fly. **Don't get your eyes too close to the band—it might snap.**

You can use a paperclip and tape here.
