

## Calculation Strategies Key Stage 2

At NAIS Hong Kong we have a structured calculation progression policy. This details the strategies that children will use from the very beginnings of Maths through to fluency and efficiency.

### Addition

#### Phase 2 - Empty Number Lines

$$8 + 6 = 14$$

Phase 3 - Partitioning

$$\begin{array}{r} \text{T}^{\text{U}} \\ 76 \end{array} + \begin{array}{r} \text{T}^{\text{U}} \\ 47 \end{array} = 123$$

Tens  $70 + 40 = 110$

Units  $6 + 7 = 13$

total  $110 + 13 = \underline{123}$

$$76 + 47 =$$

Phase 3 - Efficient Partitioning

$$76 + 47 =$$

$\begin{array}{l} / \quad \backslash \\ 40 \quad 7 \end{array}$

$$76 + 40 = 116$$

$$116 + 7 = 123$$

$$76 + 47 =$$

## Phase 4 - Column Method

$$57 + 86 =$$

$$60 + 90 = \underline{150}$$

(estimate by rounding first)

H	T	U
	5	7
	+	
	8	6
	4	3
	7	6
+	4	7
	2	3

## Subtraction

## Phase 2 - Number Lines

$$12 - 4 = 8$$

## Phase 3 - Partitioning

$$89 - 57 =$$

$$80 - 50 = 30$$

$$9 - 7 = 2$$

$$30 + 2 = 32$$

## Phase 4 - Counting On (numberline)

'Find the Difference'

$$83 - 48 = 35$$

## Phase 5 - Column Method

expanded layout

$$63 - 41 =$$

T	U
60	3
40	1
20	2

$$20 + 2 = 22$$

## Phase 5 - Column Method

Efficient

$$542 - 293 =$$

$$\text{(estimate)} \quad 500 - 300 = 200$$

$$\begin{array}{r} \text{F} \quad \cdot \\ \text{4} \cancel{\text{5}} \text{3} \cancel{\text{4}} \text{2} \\ - \quad \text{2} \text{9} \text{3} \\ \hline \text{2} \text{4} \text{9} \cdot \end{array}$$

check by using inverse

$$249 + 293 = 542$$

## Multiplication

## Phase 2 - Arrays

$$3 \times 5 = 15$$

$$7 \times 4$$

## Multiplication

### Phase 4 - Grid Method (Partitioning)

$$27 \times 4 =$$

x	20	7
4	80	28

80
+ 28
108

.

## Multiplication

### Phase 5 - Efficient Multiplication

$$38 \times 7 =$$

estimate first

$$40 \times 7 = 280$$

38
<u>  </u> <sub>s</sub> x 7
266

## Division

## Phase 4 - Chunking

$98 \div 7 =$

$$10 + 2 + 2$$

$$= 14$$

---

$$\begin{array}{r}
 7 \overline{) 98} \\
 \underline{70} \quad (10) \\
 28 \quad + \\
 \underline{14} \quad (2) \\
 14 \quad + \\
 \underline{-14} \quad (2) \\
 00
 \end{array}$$

$$\begin{array}{l}
 1 \times 7 = 7 \\
 2 \times 7 = 14 \\
 5 \times 7 = 35 \\
 10 \times 7 = 70 \\
 20 \times 7 = 140
 \end{array}$$

## Phase 5 - Long Division

$150 \div 12 =$

$$\begin{array}{r}
 012 \\
 12 \overline{) 150} \\
 \underline{12} \downarrow \\
 020 \\
 \underline{24} \\
 06
 \end{array}$$

$$\begin{array}{r}
 12 \overline{) 150} \\
 \underline{12} \phantom{0} \\
 30 \\
 \underline{24} \\
 60 \\
 \underline{60} \\
 0
 \end{array}$$

12.5

## Phase 6 - Short Division

$$876 \div 6 = 146$$

$$\begin{array}{r} 146 \\ 6 \overline{) 876} \end{array}$$

$$146 \times 6$$
