

Being Ambitious Professional Learning by Jenna Lewis (Year 2)

Numicon course for Early Years & Primary Teachers at Bangkok Patana School, Bangkok on 7th November 2015

The Numicon training was highly informative and has impacted the lessons of year 2 students. It has given us visual ways to access numbers and the number system.

Just this week, Numicon has helped us to see the relationship between double and half and then we progressed to doing inverse calculations ($15 + 5 = 19$, $19 - 5 = 15$).

It has been an extremely beneficial tool for all children in the classroom and the course has enabled me to support the children confidently with many techniques. I have also been sharing what I have learnt with other colleagues within the school, such as other year 2 teachers, teaching assistants and year 3 teachers.

Do you have any professional development news you want to share?
